

Sales Performance Dashboard

Microsoft Excel Project Report

1. Project Overview

This project is an interactive Sales Performance Dashboard developed in Microsoft Excel. The purpose of the dashboard is to convert raw sales information into a visual business report that helps analyze sales executives, total sales, target achievement, and the percentage away from target.

2. Objectives

- Analyze sales performance for individual sales executives.
- Compare total sales between executives.
- Track Target Hit % for each executive.
- Measure Away From Target %.
- Provide an interactive dashboard view using city/dashboard selectors.
- Present the results through charts and KPI-style summary tables.

3. Dashboard Components

Component	Purpose
City / Dashboard selectors	Allow the user to switch between dashboard views.
Total Sales table	Shows total sales for the displayed sales executives.
Target Hit % table	Shows the percentage of target achieved by each executive.
Away From Target % table	Shows the percentage away from the target.
Sales bar chart	Visual comparison of total sales.

Target Hit % bar chart	Visual comparison of target achievement.
Away From Target % line chart	Shows the variation in away-from-target percentages.

4. Analysis Shown in the Dashboard

In the displayed view, the dashboard shows five sales executives: Anikuttan, Arvind Sharma, Jagdish Chandra, Miny Mole, and Rachita Anupam. The total sales displayed are 1,919. The Target Hit % values shown are 76.40%, 75.80%, 77.80%, 76.80%, and 77.00% respectively. The Away From Target % values shown for the corresponding executives in the selected view are 66.80%, 71.40%, 68.80%, 65.80%, and 66.80%.

5. Excel Techniques Used

- Data organization and preparation
- Excel formulas for KPI calculations
- Filtering and sorting
- Interactive checkbox controls
- Summary tables
- Bar and line charts
- Data labels and percentage formatting
- Dashboard formatting and layout design

6. Workbook Structure

RAW DATA – source sales dataset.

Detail1 – supporting calculations/detail analysis.

my dashboard – final interactive dashboard and visualizations.

7. Business Insights Supported

- Compare sales generated by individual sales executives.
- Monitor progress toward sales targets.
- Identify the percentage away from target.
- Compare performance across different city/dashboard selections.
- Communicate sales KPIs in a compact visual format.

8. Skills Demonstrated

Microsoft Excel, Data Analysis, KPI Reporting, Dashboard Development, Data Visualization, Business Intelligence, Formula-Based Analysis

9. GitHub Repository Recommendation

Upload the Excel workbook, this report, the README file, and a dashboard preview image. A clean repository structure makes the project easy for recruiters or reviewers to understand.

10. Resume-Ready Project Description

Sales Performance Dashboard – Microsoft Excel: Built an interactive Excel dashboard to analyze sales performance across multiple city views and sales executives. Created KPI summaries for total sales, Target Hit %, and Away From Target %. Developed bar and line charts with data labels and organized raw data, supporting calculations, and dashboard reporting into separate workbook sheets.

Prepared for GitHub Portfolio – Vishal Sharma
